Keep tabs on the calendar

Start the new year by placing your school calendar where you see it every day. If your child needs to miss school, talk with his teacher about making up work. Remember that excused and unexcused absences take a toll on learning. Keep track of how often your child is absent or tardy.

How was school today?

Ask your child about his day—with a twist. At dinner time, suggest that your child describe three things that happened at school. The twist is that one of them must be made up, and other players have to guess which it is. Encourage your child to include plenty of details. A parent or older sibling can help your child prepare if needed.

Exercise observation skills

Scientists are keen observers. They notice and remember details. To help your child develop this trait:

• Ask her to describe the front of a building she knows well, such as your house or apartment building.
• Encourage her to be specific. How many stories high is the building? What color is the front door?
• Together, check the reality against the details she remembered.

Expect more responsibility in 2012

Adults who can’t balance a checkbook or manage basic life skills such as cooking or laundry may not have been expected to take responsibility as young children.

The beginning of a new year is a great time start teaching your child these skills. Here’s how:

• **Expect your child** to get up by herself in the morning. Even a first grader can learn to set an alarm clock.
• **Teach your child** how to do laundry. A young child can help sort clothes before washing and fold and put them away when they’re dry. An older child can learn how to use a washing machine.
• **Help your child** manage money. Whether it’s money from a birthday gift or an allowance, expect your child to put some aside for savings. Talk to your child about the importance of saving money for college.
• **Ask your child** to help. Every family member should do something that helps out the whole family. A young child can set or clear the table. An older child can learn how to prepare a simple meal. Be sure to say thank you when your child’s help makes your home run more smoothly.
• **Volunteer.** Make time for your family to volunteer together. Doing something for others builds responsibility.

Pacing bolsters test success

Tests require a good sense of timing. If kids work too quickly, they’re likely to make careless mistakes. If they work too slowly, they won’t finish in time.

Help your child learn how to pace herself. Start by talking about activities in which pacing is important. A 30-minute TV show can’t last 27 minutes (or 33 minutes). If a child gets to the bus a minute late, she has still missed it!

When your child is doing homework, have her try to guess how long it will take. At first, you might need to help. “Do you really think you could do 15 math problems in five minutes?” Then see how close her estimate is to the time it really takes.

Support your child’s teacher

Children’s school success starts at home—and kids’ attitudes about school start there, too. What you say can influence how your child feels, so speak positively about your child’s teacher. If you have a problem or concern, make an appointment to meet with your child’s teacher rather than speaking negatively at home. After all, you both have the same goal in mind: your child’s success.

Catalog + calculator = math

Use old catalogs to teach your child the skill of estimating and give him practice in using a calculator. Here’s how:

1. Have your child look through a catalog and choose three or four items he wishes he could buy.
2. Ask him to estimate the items’ total cost.
3. Have him use a calculator to check his work. How close was his estimate?

How is your child doing in school?

The school year is about at the midway point. To see if you have a good idea of how well your child is doing, answer the following questions yes or no:

1. Do you talk with your child about graded tests and projects when she brings them home?
2. Do you ask your child to talk about why she thinks she received a grade and what she has learned—whether it’s a good grade or a poor grade?
3. Do you contact your child’s teacher to learn what is going on if your child has a problem with a subject?
4. Do you check your child’s report card, paying attention to conduct and behavior grades as well as academic grades?
5. Do you review your child’s state test results with her teacher?

How did you do? Each yes answer means you are keeping up with your child’s progress in school. For each no answer, try that idea from the quiz.

Q&A

What can parents do when children dislike school?

Q: Lately, my son has been telling me he hates school. How can a parent sort out what’s truth and what’s exaggeration? And how can I help him without taking over his life?

A: Not all kids who say they hate school actually do. Sometimes, they’re just looking for attention (or for a chance to put off homework).

It’s important to listen to your son. Find a time when you can have an uninterrupted talk. Say, “You’ve said you hate school. What’s making you feel this way?”

Then consider what he says. Is he struggling in science? Are kids mean to him on the bus? Is he feeling overwhelmed because he’s in too many activities?

Once you figure out what’s causing the problem, you can help him find solutions. For example:

- If he’s having trouble in a class, ask his teacher for advice. Is he turning in homework? Does he need remedial instruction?
- If he feels kids are mean to him, ask for specific details. Then talk with his teacher. Ask how you can work together to help your son cope with this situation.
- If he feels overwhelmed by his activities, decide what could be cut. Reassure your son that you will help him. Talk positively about school, his teachers and what he is learning.
